

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Canceled).

2. (Currently Amended) A method of selecting an operating mode radio circuit of a dual mode wireless handset in connection with a handoff of the handset, implemented in the handset, comprising:

associating, with a first wireless subsystem via a first operating mode radio circuit coupled to a server connected to the Internet[[,]] and coupled to a data base configured to contain ~~containing~~ capability data indicative of the operating mode radio circuit capability of a first or a second wireless subsystem coupled to the server;

transmitting ~~query messages containing an indication of the first wireless system and~~ a capability information request to the data base including information identifying the second wireless subsystem to which the handset is connected and a specific latitude-longitude location of the handset in a first operating mode on the second wireless subsystem to the data base after execution of the handoff from the first wireless subsystem to the second wireless subsystem to retrieve the capability

~~data of the second wireless subsystem, wherein the query messages contain information identifying the wireless subsystem to which the handset is then connected;~~

receiving ~~the~~ a capability information response from the second wireless subsystem indicating a second operating mode radio circuit capability of the second wireless subsystem ~~data and configuration data~~ including a listing of base stations that border the ~~first~~ second wireless subsystem from the data base ~~on the second wireless subsystem~~ in the first operating mode radio circuit; and

switching into a second operating mode radio circuit on a condition that the retrieved capability data indicates that the second wireless subsystem is capable of operation in the second operating mode radio circuit.

3.-6. (Canceled)

7. (Previously Presented) The method of claim 2, wherein the associating comprises designating the data base as a second Internet destination port for the handset.

8.-24. (Canceled)

25. (Previously Presented) The method of claim 2, wherein the server is designated as a first Internet destination port for the handset, the second wireless subsystems being coupled to the server through the Internet.

26.-34.(Canceled)
